

HBQconnect Mobile App

Monitor your factory and home from your phone

Connect HBQ devices, view readings and receive event notifications in one app. Help operators monitor industrial systems and users manage connected Smart Home devices remotely.

Illustrated Industrial IoT and Smart Home applications. App screens shown in Vietnamese.

INDUSTRIAL APPLICATIONS

Monitor pressure, electrical readings and environmental conditions in operating areas.

SMART HOME

Monitor indoor air quality, energy use and devices connected to HBQconnect.

Key features at your fingertips

01 Device connectivity

Discover supported devices via Bluetooth and configure their Wi-Fi connection.

02 Dashboard monitoring

View readings through the dashboard assigned to each device profile.

03 Event notifications

Receive notifications based on device and system configuration.

04 Remote control

Perform control actions on supported devices.

Android / iPhone / iPad

Features depend on devices, permissions and configuration.

Connect and get started

Android setup for devices supporting Bluetooth / Wi-Fi

01 Create an account

Install the app, register and activate your account by email.

02 Discover devices

Enable Bluetooth and location. Open Devices, tap + and grant the required permissions.

03 Set up Wi-Fi

Select the discovered device, enter the Wi-Fi password and complete the connection.

04 View readings

Return to Home and select a device to view its readings and dashboard.

Illustrated Android workflow. Screens and steps may vary by app version or platform.

Everyday device monitoring

Devices: check the device list and online / offline status.

Home: open a device to view readings and update timestamps.

Alarms: review events based on the supported configuration.
